

# JBL® Professional for the Ferrari 488 GTB

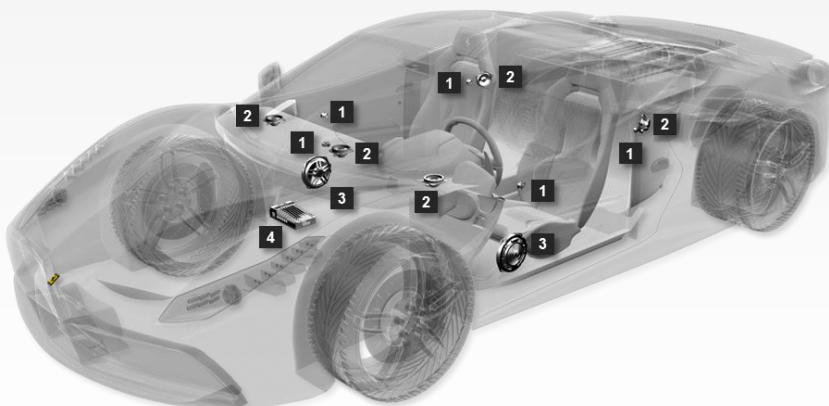

## JBL® high-performance sound for extreme driving thrills

JBL® Professional brings decades of in-concert and studio experience as well as excellence in sound to the close cooperation with Ferrari. The 12 carefully placed speakers in the new Ferrari 488 GTB combine high performance, advanced materials, and brilliant surround sound while they are driven by a powerful 1280-watt 16-channel Class-D amplifier and valorised by implementing HARMAN's unique QuantumLogic® Surround Sound technology.

- With QuantumLogic® Surround digital signal processing, individual voices and instruments, as well as embedded reverberant spatial information, are identified then re-authored into a precise multichannel soundstage. This enables an astounding 7.1 channel surround sound experience from any stereo audio source.
- The result is plain to hear: Together with the powerful 1280-watt 16-channel Class-D amplifier and HARMAN's unique QuantumLogic® Surround Sound technology, the twelve carefully placed speakers, with their clear highs, powerful basses and low-distortion midranges, deliver an unmistakable listening experience for passengers in all seating positions.
- A choice of two preset equalizer positions guarantees an exquisite sound – top up or down.

### 12 high-performance JBL® Professional speakers
