**FOUNTAIN VALLEY, Calif., April 11, 2017** — The road to efficient, eco-conscious performance starts with the Hyundai Ioniq. The world's first dedicated vehicle with three electrified low- and zero-emission powertrain choices, the Ioniq Hybrid boasts an EPA-estimated 58 MPG (combined), making it the most efficient vehicle in the U.S. market without a plug. Even the interior is constructed with the environment in mind, crafted from renewable materials such as bio-fabrics and recycled plastics.

In the following infographic, Hyundai outlines how the Ioniq models help reduce both fuel and electricity use, while still getting you where you need to go — wherever that may be.
